

MAKING GREEN HYDROGEN WORK FOR AFRICA

Advancing youth employment and inclusion in a just green hydrogen transition in Africa

Powering the future, with youth and women at the center.

The Opportunity

Africa has the potential to lead the world in clean energy through the production of green hydrogen. But unless the energy transition is just, young people and women risk being left out of emerging jobs and opportunities. Ensuring social equity and bridging the skills gap are essential to empower youth, promote gender inclusion, and prepare the workforce for a sustainable future.

Our Goal

To ensure that Africa's GH2 economy creates skills, jobs, and justice for all.

How we work

Strategic Foresight

Exploring future skills and opportunities for a just green hydrogen transition.

Social cartography

Mapping how projects impact people and places.

Community engagement

Creating spaces for communities to shape the discussion and solutions.

Policy dialogue

Bringing policymakers, industry, and civil society to the table for inclusive solutions.
